THE WORLD of

**Power Generation Boilers &
Waste Incinerators**

HotworkTM

World Leaders

in Power Generation Boilers & Waste Incinerators

Since 1965 Hotwork has provided refractory dryout and heatup expertise to a multitude of industries. With over 20,000 projects completed to date, we are the largest and most experienced dryout company in the world.

Our equipment and personnel are strategically placed around the globe allowing us to respond to customer's needs no matter the location. Our field personnel are backed by a management team with an average experience of over 25 years. But we are more than experience. Hotwork prides itself on being a solution-oriented company utilizing cutting edge technology to deliver the best possible service.

Services to the Power Generation Industry

Hotwork's unique high velocity burner system can be used for a variety of services in the power industry. Our burners can serve as a heat source during chemical cleaning, steam blows, hydrostatic testing or freeze protection during colder months. In addition, Hotwork also provides refractory dryout services for cyclones, fireboxes, floors, target walls and ash hoppers.

Fuel Flexibility

Natural Gas is not always available due to the construction schedule or the remote location of the jobsite. To address this issue, Hotwork's burners have the ability to burn propane or #2 Diesel Fuel without sacrificing performance. We can also supply necessary pumps, vaporizers and regulators to insure proper operation.

Hotwork Services Boilers of Any Type & Size at Any Location

From CFBs to grate boilers to cyclone fired boilers, we know how to service them all. From a 5 MW boiler in a lumber yard to a 1,150 MW Supercritical coal-fired boiler, Hotwork has experience with all types and sizes. In addition, our worldwide presence allows us to service boilers even in the most remote locations. Many of these units contain refractory that must be dried out prior to putting the boiler into service. No matter the design, we know how to get it done quickly and safely.

“Our **worldwide presence** allows us to service boilers even in the most remote locations.”
